

IMA WORKING GROUP ON ENVIRONMENTAL MINERALOGY AND GEOCHEMISTRY (WGEMG)

Report for 2013 and 2014

During the reporting period, the WGEMG participated in the organization and running of sessions on “Mineralogy on Radioactive Waste Disposal, Decontamination of Radioactively Contaminated Site and Decommissioning of Nuclear Power Plants” and other related sessions on general sessions at IMA2014. The conveners were Anhuai Lu, Jordi Cama and Tsutomu Sato.

David Vaughan, the first chairman of WGEMG, prepared and participated well in the organization and running of session at some conference such as IGC and Goldschmidt. Sometime, WGEMG published a special issue in scientific journal such as applied geochemistry. However, WGEMG did not have a member list until now. Therefore, WGEMG should have a member list for further activity in future. Now, to make a member list, Tsutomu Sato prepares to have a mailing list after IMA2014 meeting.

Plans are well in hand for several sessions at Goldschmidt conference 2016 in Yokohama.

Tsutomu Sato (Chairman)
